1 1. Introduction

Purpose

This guide provides clients with the necessary instructions to monitor their water consumption, manage their billing, and interact with the physical smart water meter installed at their property.

Audience

This manual is intended for residential and commercial end-users connected to the Waterboard Management System.

Prerequisites

- A modern web browser (Google Chrome, Mozilla Firefox, or Safari) or a mobile smart-phone.
- A registered email address to create and manage your account.

2 2. Your Smart Meter Hardware

Your property is equipped with a state-of-the-art smart meter that automatically tracks your usage and syncs with your online portal, eliminating the need for manual readings.

The physical meter is designed to be highly autonomous and features:

- A high-precision internal flow sensing unit.
- An integrated wireless cellular module to transmit usage data to the administration.
- A long-lasting internal battery designed to operate for years without replacement.

Reading the Local Display: To conserve battery life, the digital screen on your meter remains off during standard operation. If you wish to check your exact current reading locally:

1. Locate the **wake button** on the front face of the meter.
2. Press the button firmly once.
3. The display will illuminate briefly, showing your total water consumed in **Liters**.

Important Installation Note: Ensure the space around the meter remains clear. Do not place heavy metal enclosures, boxes, or dense objects around the meter, as this can block the wireless signal and prevent your dashboard from updating.

3 3. Account Access

Purpose: Register for a new account or log in to view your usage.

Procedure (New Users):

1. Navigate to the Client Portal URL.
2. Click **Register** or **Sign Up**.
3. Fill in your personal details (Name, Email, Password) and your assigned Meter ID.
4. Click **Submit** to create your account.

Procedure (Returning Users):

1. Navigate to the Client Portal URL.
2. Enter your registered **Email** and **Password**.
3. Click **Login** to access your Dashboard.

Notes: If you forget your password, use the **Forgot Password** link to receive a secure reset email.

4 4. Client Dashboard

Purpose: Provide a quick, visual overview of your recent water consumption.

Client Dashboard Interface

Procedure:

1. Log in to your account. The Dashboard is your default view.
2. Review the **Usage Trends** charts to see visual graphs of your recent water consumption.
3. Check the summary widget for your current billing cycle estimates.

5 5. Billing & Payments

Purpose: Review your generated invoices and track payment statuses.

Procedure:

1. Navigate to the **Billing** section using the portal menu.
2. Select a specific invoice to view its detailed breakdown (Total usage, assigned tariffs, taxes, and final amount).
3. Verify the payment status (e.g., Paid, Pending, or Overdue).

6 6. Account Profile

Purpose: Keep your contact details and security credentials up to date.

Procedure:

1. Navigate to **Profile** or **Settings**.
2. Edit your contact number or email address as needed.
3. To change your password, enter your current password followed by the new desired password.
4. Click **Save Changes**.

7 7. Troubleshooting & FAQ

Common Issues

Issue: My dashboard hasn't updated my usage today.

- *Explanation:* To conserve the internal battery, your smart meter transmits data to the portal periodically (typically every hour).
- *Action:* Wait for the next hourly synchronization cycle. If it has been more than 24 hours, check that no large metal objects are blocking the meter's wireless signal.

Issue: The physical meter display is completely blank.

- *Explanation:* The screen turns off automatically to save power.
- *Action:* Press the physical "Wake" button on the front of the meter. If the screen still does not turn on after pressing the button, please contact support for a battery inspection.

Q: Can I pay my bill directly through the portal?

A: Please refer to the specific payment instructions listed on your generated invoice in the Billing tab for accepted payment methods.

Q: How do I know if I have a water leak?

A: Monitor your Usage Trends graph on the Dashboard. If you notice a steady, continuous increase in consumption during hours when no water is being used (like overnight), you may have a plumbing leak.
